Characteristics

ABSTRACT

Eight tables, accompanied by brief textual information, present facts from 1985 to 1990 about the school experiences of youth with disabilities. The tables focus on: (1) enrollment in regular education courses by stulents with 11 types of disabilities attending regular secondary schools; (2) services received by secondary students with disabilities, by disability and type of service; (3) average per-pupil expenditures for special education programs by disability and program type; (4) number and percentage of disabled students ages 16-21 exiting the educational system, by disability and basis of exit; (5) postsecondary education participation of special education exiters; (6) mean American College Testing scores for high school students with disabilities requiring special testing; (7) factors associated with dropping out of secondary school for youth with disabilities; and (8) parental reports of reasons why adolescents drop out of secondary schools. The text and tables indicate that almost half of special education students receive additional services other than basic special education and that the total cost of educating a pupil in a self-contained program is 2.5 times the cost of educating a regular education pupil, while the cost of educating students in resource programs is 1.9 times that of a regular pupil. The National Center for Youth with Disabilities (NCYD) is a project of the Society for Adolescent Medicine and the Adolescent Health Program at the University of Minnesota. The Center is committed to raising awareness of the needs of adolescents and young adults with chronic illness and disabilities as well as disseminating information and data on related topics. In keeping with this mission, we distribute ongoing F.Y.I. Bulletins which complement the information in NCYD's annotated bibliographies, Cydline Reviews, and quarterly newsletter, Connections.

NCYD F.Y.I. Bulletin topics include health, educational transitions and youth employment. F.Y.I. Bulletins may be ordered by calling toll free (800) 333-6293 or (612) 626-2825, or (Voice & TDD) (612) 624-3939. They may also be ordered by writing directly to the National Center for Youth with Disabilities, University of Minnesota, Box 721-UMHC, Harvard Street at East River Road, Minneapolis, MN 55455.

The school environment is an important factor in understanding the school experiences of youth with disabilities. Significant variation in placement patterns exists across handicapping conditions. Students with learning disabilities or speech impairments were served primarily in regular classes or resource rooms (77% or 92% respectively). Nationally, 56% of the students with mental retardation were placed in separate classes.

Most youth with disabilities (89%) attended comprehensive secondary schools whose student bodies were primarily students without disabilities. Overall, 28% of youth with disabilities attended school with fewer than 500 students; 39% attended schools between 500 and 1100 students and about 33% attended schools with more than 1100 students.

TABLE 2:

Schools provide a wide variety of services which enable students to learn in the classroom. Overall, slightly over half (52.8%) of the special education students did not receive additional services other than the basic special education services, although this figure varies markedly by type of disability.

TABLE 3:

These data provide nationally representative estimates of the per-pupil expense of educating students with disabilities. The total cost of educating a child with disabilities in a self-contained program is 2.5 times the cost of educating a regular education pupil. The costs below reflect only special education services, not additional regular education services.

The total cost of educating a pupil in resource programs is about \$1,700.00 less than educating students in self-contained classes and about 1.9 times the cost of educating a regular education pupil. Sixty-eight percent of pupils in special education received their instruction through resource programs. Preliminary analyses do not indicate significant differences between elementary and high school costs.

Table 3 Average (Waighted) Per-Pupil Expenditures for Special Education Programs by Individual Handicapping Conditions and Program Type* (1985-86) (Age Group 6-21)

	Program Type (per p	upil expenditures)
Condition	Self-Contained (more than 15 hours/week)	Resource (less than 15 hours/week)
Learning Disabled	\$3,063.00	\$1,643.00
Autistic	7,582.00	NA**
Serious ly Emotionally Disturbed	4,857.00	2,620.00
Mentally Retarded	4,754.00	2,290.00
Speech impaired	7,140.00	647.00
Visually Impaired	6,181.00	3,395.00
Hard of Hearing	6,058.00	3,372.00
Doef	7,988.00	NA**
Deaf-Blind	20,418.00	NA**
Orthopedically Impaired	5,248.00	3,999.00
Other Health Impaired	4,782.00	NA**
Multihandicapped	6,674.00	NA**
Non-Categorical	3.884.00	1,731.00

^{*}Sample size and standard error vary by condition and program type.

TABLE 4:

Research indicates that special education students drop out of school at a higher rate than the regular education population. Concern for high school dropouts is predicated on a belief that leaving high school before graduation is harmful for the individual and for the society. While some studies indicate that not all dropouts are behind in school or have substandard test scores, and that some at least have an equal or greater sense of self-esteem and control than high school graduates, most evidence supports the understanding that dropping out has negative personal and social consequences.

The major consequence of dropping out of school for youth with disabilities include poor employment potential, fewer opportunities for further education, and lower wage earnings for those employed.

^{*}Initially, achools report these students dropped out. Subsequently, 65% of parents report, students had other reasons.

[&]quot;Not available.

TABLE 5:

Two common paths open to youth in the early years out of secondary school involve pursuing post-secondary education or training, or securing employment. Fewer students with disabilities than students without disabilities attend post-secondary education schools/programs.

Table 5 Postsecondary Education Participation of Special Education Exiters

	Percentage of 1985–1996 Exiters Taking Courses From:								
Disability Category	Any Post- secondary institution	Vocational or Trade School	2-Year College	4-Year College	Semple Size

TABLE 6:

Although mean ACT composite scores for specially tested students with disabilities are lower than normative data, the differences in several cases are minimal. Differences exist by type of disability and reflect a continuing need for schools to address issues related to the preparation of students with disabilities for postsecondary education.

Table 6

Mean ACT Scores for High School Students with Disabilities Requiring Special Testing: 1989–1990

TABLE 8:

Just as there is variation by disability in the percentage of students dropping out, so too are there differences in reasons for dropping out. Recent research suggests that school practice or culture, such as the structural organization of schools, the establishment of a social bond between students, and the norms governing the institution, may influence the decision to drop out or stay in school.
